

# VGI Case Studies and Accuracy Investigations

Workshop: Voluntary geographic information for spatial data infrastructures?

Wageningen University

16 April 2010

Dr. David Coleman  
Dean of Engineering & Professor,  
Department of Geodesy & Geomatics Engineering  
University of New Brunswick

**Important  
Additional Attributes**

**Addresses**

**Location**

**How can we reliably improve  
our data?**

**Currency**

**Proper Names**

**Time-Sensitive Changes**

# The Vision...

✧ Can we use "**the experience of the crowds**"...

.... our customers, our users, our employees, our colleagues or our soldiers...

... to voluntarily update authoritative mapped information?

- ✓ Greater user involvement
- ✓ Faster updating cycles

# Focus of Current Research

To investigate and demonstrate how

.....volunteered contributions of geospatial data from both individual citizens *and* professional mapping organizations ....

...may be authenticated, processed and employed to populate new public, government and commercial map databases.

# Essential Questions

- ✧ What is the organization's rationale for considering VGI? What mission, objective or problem is being addressed?
- ✧ To what extent, if at all, should VGI be adopted?
- ✧ How may credible VGI contributors be qualified?
- ✧ How may incorrect, misleading or damaging contributions be identified and excluded?
- ✧ How much control over content and quality are such organizations prepared to relinquish? Who makes the final decisions regarding the reliability of a given update?
- ✧ Why would individuals want to contribute anyway (and what keeps them contributing)?

# 3 Ideas Underpinning Web 2.0

1. Content creation is triggered by events.
2. User generated content is increasingly being consumed by the community.
3. The community could take on some of the functions of the editor.

# OpenStreetMap.org

OpenStreetMap

The Free Wiki World Map

OpenStreetMap is a free editable map of the whole world. It is made by people like you.

OpenStreetMap allows you to view, edit and use geographical data in a collaborative way from anywhere on Earth.

OpenStreetMap's hosting is kindly supported by the UCL VR Centre and bytemark.

# "Crowd"

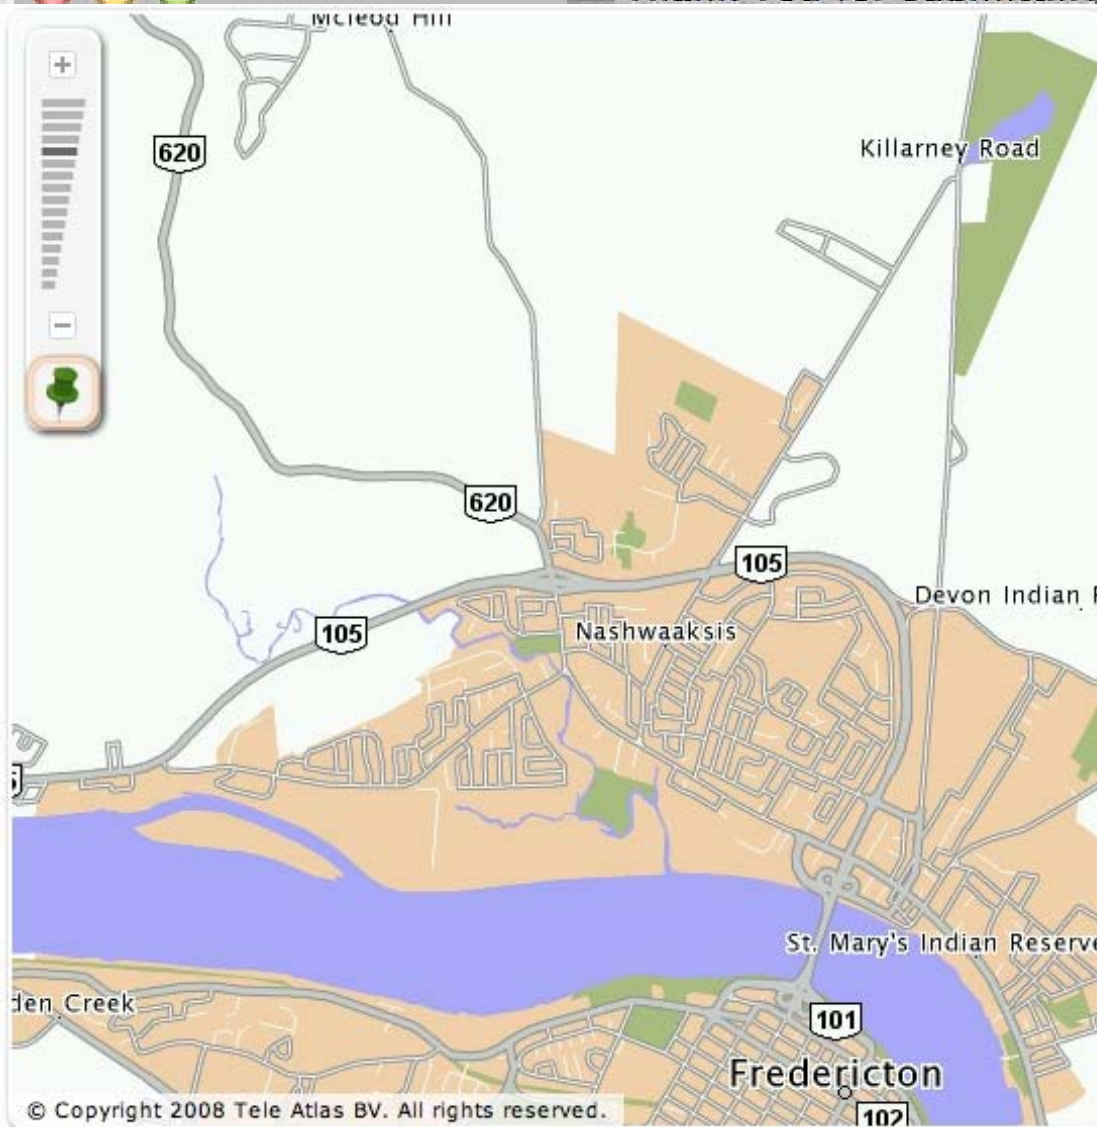

Google  
Map Maker

Countries editable in Google Map Maker

Thank You for submitting your report to Tele Atlas Map Insight.

## Step 1 - Locate

Country:

State/province:

### Select an address:

Hwy 105, E3A, York County, NB

Hwy 105, E3A, York County, NB

Can't find your address in the list? →

or:

### Locate by coordinates

Latitude:  Longitude:

Use decimal degrees, e.g. -71.25

SEARCH

## Step 2 - Describe

## Step 3 - Submit

appreciate conscientious users like you who take the time to tell us where we might need

Please continue to help us by entering new issue reports at <http://mapinsight.teleatlas.com> them.

Thank you again for your feedback.

# Who are the "Volunteers" in VGI

# What can we learn from other efforts on the Web?

Free / Open Source Software Development	Wikipedia
Contributor Rating and User Reputation (Expedia, Amazon, E-Bay & others)	OpenStreetMap and others
Customer map updates to TeleAtlas/TomTom, Nokia/Navteq & others	LBS aspects of social networking sites & services
Emerging Range of User Contribution Systems (UCS)	

# Characterizing the Contributions

## + Constructive Contributions

- ✧ Legitimate New Content;
- ✧ Constructive amendments;
- ✧ Correction of damaging contributions;
- ✧ Minor Edits & Format Changes

# Characterizing the Contributions

## ■ Damaging Contributions

- ✧ Mass deletes
- ✧ Nonsense
- ✧ Spam
- ✧ Partial deletes
- ✧ Deliberate Misinformation
- ✧ Unintentional Misinformation

*Harder  
to  
Track*

# What Motivates People to make Constructive Contributions?

## *Examples:*

1. Altruism
2. Part of existing job, mandate or personal project
3. Offer practical solution to a shared problem
4. Protect or enhance a personal investment
5. Enhanced Personal Reputation
6. Social Reward by being part of a larger network or virtual community
7. Pride of Place

# What Motivates People to make *Damaging* Contributions?

## *Examples:*

1. Mischief
2. Malice or Criminal Intent
3. Social or Economic Agenda

# So what, Dave?

## *What have we learned from all this?*

- ✧ Contributors want recognition for their contribution.
- ✧ They want to see their contribution (and quickly).
- ✧ There are established approaches and technologies to validate contributions *and* contributors.
- ✧ Graduated approaches *can* be accommodated.
- ✧ In-house responsibilities continue to evolve from *production* towards *intelligent filtering*.

**Volunteers Wanted!**

The U.S. Geological Survey Web-based Data Collection Program Needs Volunteers

# tomtom® Mapshare

- ❖ 20 million drivers using TomTom – the world's largest satellite navigation community.
- ❖ TomTom owns TeleAtlas – TeleAtlas' customers reporting over 15,000 map "errors" per month BUT can take 6-12 months to verify and fix.
- ❖ MapShare service introduced in mid-2007 to: (1) streamline the notification process; and (2) enable customers to use their own updates immediately.

**Add  
missing POI**

**Edit

<b>Outlet for Self-Expression</b>	No	No	No
<b>Pride of Place</b>	???	Yes	Yes

# Returning to Fundamental Questions

- ✧ *Should a Public Sector Mapping Organisation do this?*
  - ✧ Rationale? What problem(s) are we trying to address by doing something here?
  - ✧ What's our Vision?
  - ✧ Benefits?
  - ✧ Risks?
  - ✧ Culture changes required?
  - ✧ Institutional or organizational impediments?

# More Questions...

- ✧ *Where do we start and how far do we take this?*
  - ✧ Keep it within our own organization or allow "real outsiders" to contribute?
  - ✧ Who holds the pencil? Full-edits, or just a tool for Update Notification and Prioritization?
  - ✧ Who makes the final decisions?
  - ✧ How do we sustain interest?
  - ✧ Do we risk alienating certain users or supporters?

# Culture Shift Implications for Mapping Organizations

- ✧ Moving from coverage-based to feature-based updating model;
- ✧ Accepting that "trusted outsiders" may be willing and able to make reliable contributions;
- ✧ Weighing the approaches to "Community-as-Editor" (practical and cultural);
- ✧ Accepting that such volunteered information will be "perpetually unfinished";
- ✧ Accounting for and balancing the respective rights of individual contributors, the produsage community and the mapping organization.

# Resourcing It Properly

- ✧ Quick and Easy Registration of contributors
- ✧ Immediate acknowledgement of receipt of updates and brief explanation of process.
- ✧ Rapid, but defensible and logical evaluation of contributions by custodians.
- ✧ Ability to incorporate valid updates *in some manner* within stated time limits.
- ✧ Ability to roll back to previous version(s) easily.
- ✧ Detailed Audit Trail
- ✧ Ability to rate and adjust the reputation of a given contributor over time (internally or externally governed?)

# Follow-on Research @UNB

- ✧ 3 VGI Case Studies completed to date
- ✧ Positional Accuracy Assessment of VGI Tools
- ✧ Critical comparison of different means of Assessing Credibility of Contributors and Reliability of their Contributions (e-Commerce & Social Networking examples)

# To the Future:

## "Core Values" or "Evolving Paradigms"?

- ✧ Issues in "fairness" of coverage and contributions. (Social networks are not necessarily fair or democratic...)
- ✧ Is duplication still a "bad thing"? When do we stop "using something many times" and change it?
- ✧ Changing roles of providers: "professionals", "artists", "artisans", and "amateurs".
- ✧ Anecdotes of "critical" and "uncritical" users: Useful or not?

# To the Future:

## *SDI vs. sdi*

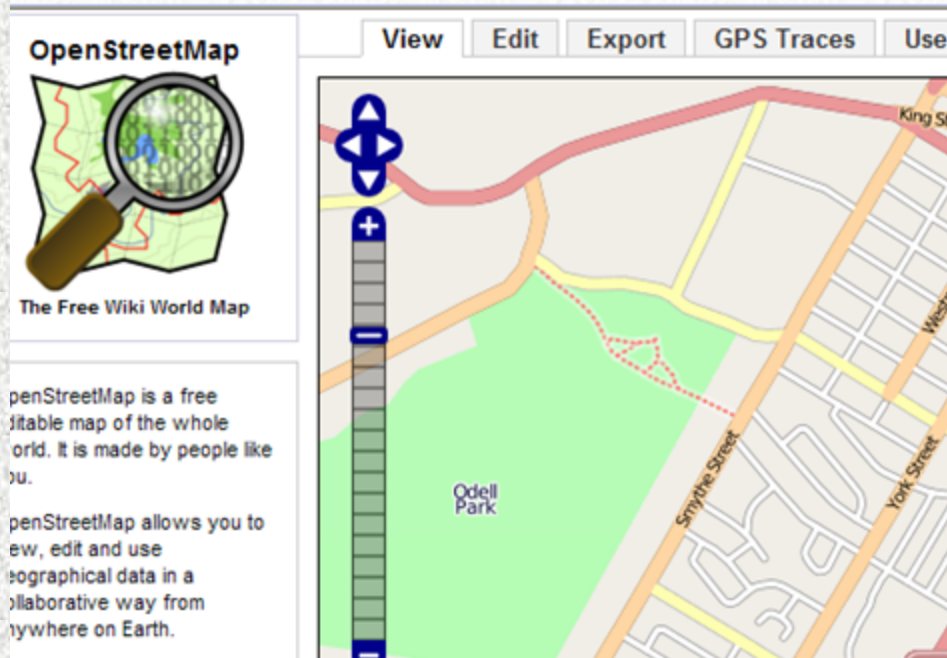

### *Public vs. Enterprise vs. Personal*

- ✧ "Institution" focus versus "usability and culture" focus
- ✧ Influence of organizational survival (public and private)
- ✧ Expanded interoperability
- ✧ Evolving and increasing levels of expectation and (sometimes) accountability

# Data Collection and Processing

## Data Collection

# Evaluating VGI

## ✧ Criteria used to evaluate VGI

- ✧ Positional Accuracy: Planimetric Accuracy of VGI must be  $\pm 10\text{m}$  for roads and  $\pm 30\text{m}$  for other features.

### Positional Accuracy Evaluation Methods

#### Buffer Comparison

(Hunter and Goodchild, 1997)

#### Datasets:

- OSM
- iPhone
- eTrex GPS
- GPSMAP GPS

#### Manual Comparison

Hunter and Goodchild, 1997)

#### Datasets:

- OSM
- iPhone
- eTrex GPS
- POI

# Evaluating VGI

Manual Comparison

Buffer Comparison

# Results: Positional Accuracy

✧  $\pm 10\text{m}$  for roads &  $\pm 30\text{m}$  for other features

## Buffer comparison Results:

Table 1: Percentage of VGI streets within 10m of NRN streets

VGI Street Centerline Data Source	Percentage Within 10m
iPhone	82.86%
OpenStreetMap	94.04%
Garmin eTrex	90.47%
Garmin GPSMAP 76CSx (Edited)	89.81%
Garmin GPSMAP 76CSx (Unedited)	90.37%

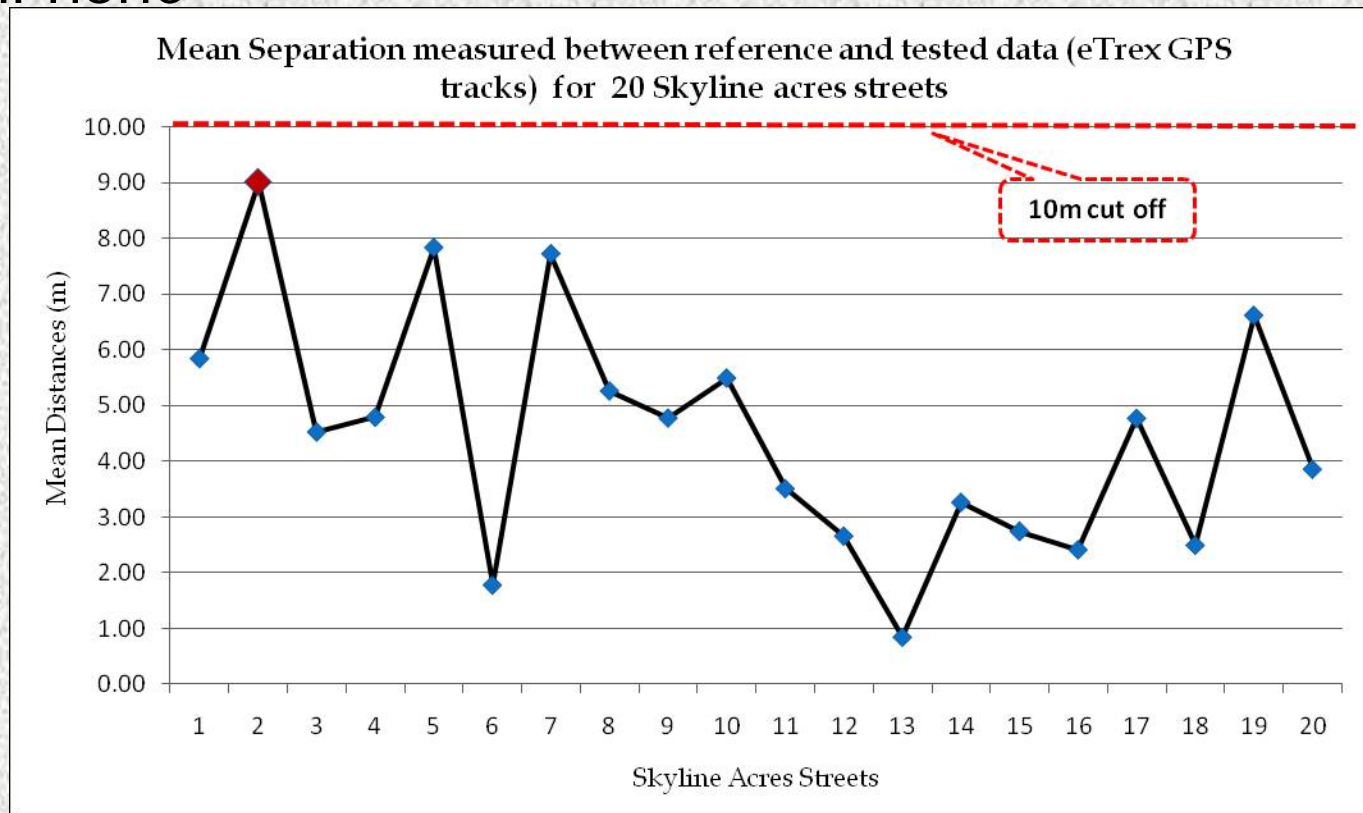

# Results: Positional Accuracy

## Manual Comparison Method

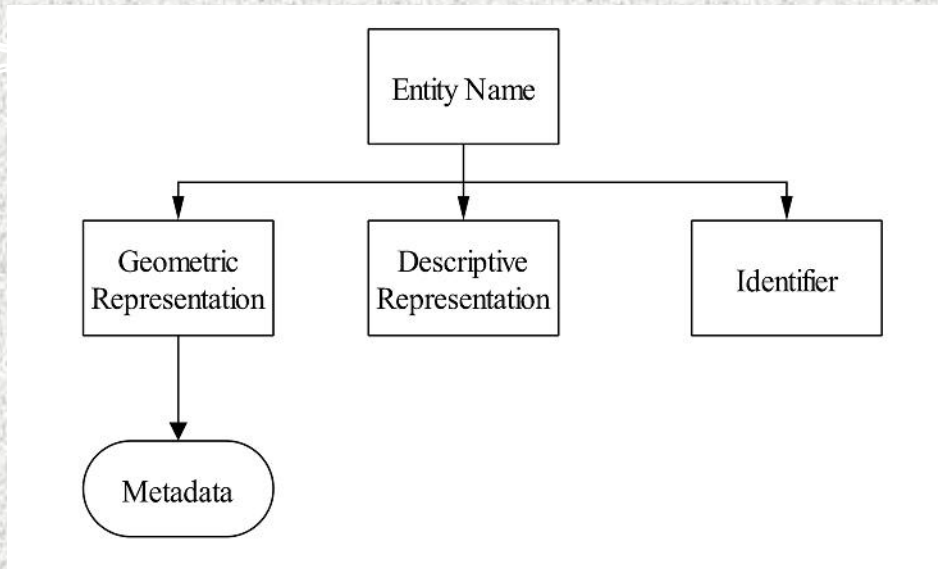

eTrex  
iPhone

*From [Sabone, 2009]*

# Results: Attribute Accuracy & Data Structure

- ✧ Attribute Accuracy: identifier + correct attributes
  - ✧ VGI street data attributes and NRN attributes NOT THE SAME – cannot be compared

No Metadata regarding geometric representation for VGI data

*From [Sabone, 2009]*

# Results

## ✧ Uncertainty:

- ✧ Maximum acceptable proportion of attribute classification errors  $\leq 5\%$ 
  - Could not compare VGI attributes
- ✧ Maximum acceptable proportion of positional errors  $\leq 10\%$ 
  - iPhone streets dataset not suitable (17.14% error)
  - POI planimetric accuracy  $< 10\text{m}$  (6.234m)
